

Australian Rollforming Manufacturers manufactures an extensive range of standard and custom formed Cable Trunking profiles for a wide variety of railway and other applications.

Made from durable, lightweight steel to all Australian Railway Authority requirements, Australian Rollforming Cable Trunking is manufactured to Australian Standard 1397 - G300, and is available in a range of profiles and two typical examples are shown on the reverse side of this leaflet.

Steel base thicknesses are usually 1.2, 1.6, 2.0 and 3.0mm, but other thicknesses, materials and profile dimensions can also be provided. The standard zinc coating is Z275, however Z450 and Z600 coatings are also available on request.

The cover is designed to fit neatly over the trunking flanges, minimising the entry of dirt and moisture, and Australian Rollforming Cable Trunking is laid with a slight gap at each join, allowing any moisture to simply drain away.

Australian Rollforming Cable Trunking sections are continuous rollformed from coils of galvanised steel strip, which enables the production of trunking and cover sections in long lengths, custom cut to suit your requirements.

Long-length trunking means less joins and provides opportunities for economies in material cost and installation time and lengths are limited only by the ability of the customer to handle and transport the sections.

Trunking Example A: Ribbed trunking flanges

All dimensions in millimetres.
Trunking and Cover: 1.6mm thick steel base, zinc-coated.

Trunking Example B: Plain trunking flanges

All dimensions in millimetres.
Trunking: 2.5mm. Cover: 1.6mm thick steel base, zinc-coated.

If it is intended to use Australian Rollforming Cable Trunking within 1km of salt marine locations or in severe industrial or unusually corrosive environments, advice on material suitability should be discussed with Australian Rollforming engineers prior to placement of order.

As engineers and investors in large capital projects, you will find that what has made us the leading special sections metal rollforming company in Australia comes down to ensuring that our customers can rely on us to deliver on time, to exacting precision and quality standards, and with innovative thinking.

Contact us to discuss your requirements.

Our reputation for **reliability** and our ability to partner our customers sets us apart from our competitors.
